WRD 204 Final Project: Essay Draft

Asad Ali, DePaul University

Demo file for the GitHub guide walkthrough.

Introduction

Many students outside computer science have never used GitHub, even though it is a simple way to store files, keep a history of changes, and share work with a single link. This project is a beginner's guide that walks through creating, organizing, and sharing a first repository.

Audience

The guide is written for students with no coding background. It avoids technical terms where possible and explains each step with a screenshot.

Approach

The guide follows eight steps, from creating an account to sharing a repository link, and ends with common mistakes and a short checklist.
